

## General project description

Community education in the field of environmental and climate protection as potential for civil society engagement (CEduP) is an Erasmus+ project, co-financed by the European Commission. It aims to develop actionable options for citizens in rural and urban areas, raising awareness of climate change issues and promoting a change towards a more sustainable lifestyle.

The central principles of community education in project understanding are:

- the strengthening of democracy and solidarity in the communities and resources
- the linking to local needs, interests and resources
- the raise of empowerment through joint action
- the promotion of inclusive learning processes.

Co-funded by the  
Erasmus+ Programme  
of the European Union

**Community education in  
the field of environmental  
and climate protection as  
potential for civil society  
engagement**

**CEduP**

**Erasmus+**

## Goals

- Activation and mobilization of civil society using community-based methods
- Raising awareness of climate change issues in individual behavior, preferences and lifestyles
- Identification of climate change adaptation activities and opportunities
- Development of options for action at the level of citizens with regard to climate change adaptation

## Target groups

- Participants of prior community education actions
  - Local and regional networking partners of each project partner organization
  - Potential and future participants in community education processes
- The civil society in general

## Objectives

*The overall aim of the project is to activate civil society engagement in the field of climate protection.*

### Specific objectives:

- Development of criteria for good practice for community education (CE) in the field of environment and climate protection
- Collection, analysis and adaptation of a total of 12 methods for CE
- Development of the guideline "Components for successful CE in the field of environment and climate protection"
- Dissemination of the developed guideline to local organizations initiating CE processes
- Exchange of experiences in implementing CE processes (learning from each other)

## Expected result

The key result is the development of the guideline "Components for successful community education in the area of environment and climate protection".

This guideline will serve as a model concept for further villages and regions with similar conditions and challenges to activate civil society in the field of environmental and climate protection.

## Virtual final conference

A virtual final conference is planned to disseminate the project result.

Participants will be stakeholders and network partners of each project partner.

**If you want to participate to the Virtual final conference (Friday, 21 October 2022), please contact the project partners for further information.**
